USB Port

ESD Prot.

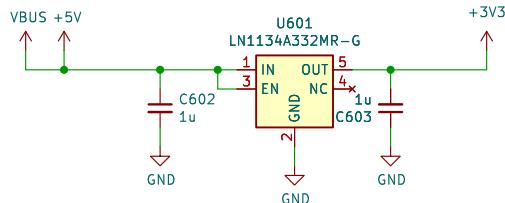

ESD protection for all 8 signals externally accessible via the USB C connector.

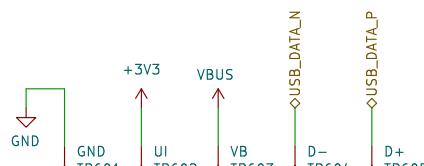

3V3 LDO

LDO regulator for generating the +3V3 power rail for the microcontroller and UI.

Testpoints

Debug-Mode Multiplexing

Debug.mode is activated when both CC1 and CC2 are pulled to logic high externally.

Board Identification

Grid firmware can identify the hardware and the board revision through a 3 wire serial interface using one or more shift register as read only memory. The content of the memory is defined by pulling the inputs high or low through pcb traces or soldered configuration jumpers.
